ELECTRONIC HEALTH RECORD

**Better information.**  
**Better patient care.**

Alberta is leading the country in the successful implementation of a single, province-wide electronic health record (EHR). An EHR is a secure lifetime record of an individual's key health care information, designed to improve patient care.

The **Alberta Netcare** EHR provides access to basic information about a patient. It is not a patient's complete medical history. As well as core personal data for patient identification, it includes key information about drugs, allergies, immunizations, lab tests, diagnostic imaging and other reports.

**Alberta Netcare** improves patient care by providing up-to-date information at the point of care. It gives Alberta Netcare authorized health care providers important patient information which supports better care decisions and improved patient safety.

**Alberta Netcare** is a highly secure system which protects patient privacy and complies with the Health Information Act (HIA).

Individuals who wish to limit the disclosure of their health information within Alberta Netcare can request that Global Person-Level Masking be applied to their record. For further information please contact your authorized health care provider.
