

## Adding New Data Sources to Alberta Netcare Portal

Thank you for your interest in submitting data to Alberta Netcare Portal (ANP)

### Start by filling in the ICC-Netcare Intake Form

Three required assessments are initiated with the intake process –technical feasibility, report content, and Privacy Impact Assessment. *ICC-Netcare intake form contact: [ICC@ahs.ca](mailto:ICC@ahs.ca)*

1. Technical Feasibility Assessment is described, including the HL7 version and technical requirements, at the Alberta Health HISCA specification web page: <https://www.alberta.ca/hisca-standards.aspx>
  - Laboratory (Lab)
  - Diagnostic Imaging (DI) & Transcribed Report (TR)
2. Content Approval Assessment - New Data Source (NDS) Principles  
Beneficence; Equality; Risk; Data Stewardship; Value; Use; Data Quality & Integrity; Technology / Portal Integration
  - The custodian of the source information must have the capacity and technical infrastructure to reliably manage the access/transfer of the source information to the portal, including updates to that information.
  - Data at the source must have adequate integrity, completeness, and accuracy of information to enable it to be considered reliable in the portal.
  - Data will be prioritized to support enhanced collaboration between the highest number and scope of professionals that can use the information, with the highest frequency of use.
3. Privacy Impact Assessment (PIA)  
Once new data sources pass through the feasibility and prioritization process, and before adding data to Alberta Netcare Portal, all data sources must supply proof of assessment of a Privacy Impact Assessment (*PIA*) from the *Office of the Information Privacy Commissioner*.

**Your NDS initial requestor will collaborate with your team, gathering required business and technical info, to fill in the “New Data Source to Netcare” sections of the ICC-Netcare intake [form](#)**
