

Viewing a Patient Summary

The Patient Summary report is a standardized collection of clinical patient data curated by the provider and uploaded to ANP from their EMR to enhance care. The PDF report is available for display in ANP.

The most important patient data is available at the point of care, enabling providers with a snapshot of relevant health information. This allows more time to focus on direct care and not having to rely on patients to remember or repeat their medical information and history.

Types of clinical data that may be curated and uploaded by the provider:

- Medications
- Allergies
- Problems
- Procedures
- Vitals
- Social History
- Family History

To view a Patient Summary report:

1. Select the patient's Electronic Health Record.
2. In the Clinical Document Viewer (CDV) Tree, select the Patient Summary folder.
