

Cancer Screening Status Report Guide

1. Report Title
2. Report Date is date on which status is determined
3. Patient Name (Last Name, First Name, Middle Name)
4. Patient Demographics (Age, Date of Birth, Gender, Personal Health Number)
5. Type of cancer targeted by screening includes Breast, Cervical and/or Colorectal
6. Exam type on which screening status is based: Breast – Either Screening Mammogram or Diagnostic Test; Cervical – Screening Pap Test; Colorectal – FIT or FOBT only
7. Date of exam on which screening status is based. **NOTE:** Date of exam may differ from observation date associated with the exam
8. Result of exam on which screening status is based
9. Cancer Screening Status identifies the action required to ensure patient is appropriately screened or treated
10. The qualifier provides more detailed action related to the patient’s screening status
11. **NOTE:** The colorectal screening status is based solely on the availability of FIT or FOBT results, as colonoscopy data is not yet available to the program. In addition, recommendations are made according to a 2-year screening interval with FIT. Consider patient’s individual risks and history before initiating and/or continuing screening through FIT testing.
12. **NOTE:** If the program has not been advised of a history of hysterectomy, a cervical screening status will appear on this report
13. Patients who meet the following criteria will either have a modified status report, or no status report assigned to them: **No status report:** A) Patient is deceased (**NOTE:** If the date of the report precedes the date of death, a status report will remain on the patient’s record); B) Out-of-province resident; C) Patient has requested his/her record be excluded from all cancer screening programs for which he/she is eligible. **Modified status report:** A) A status will not appear for the cancer type for which there has been a previous cancer diagnosis, e.g., A 55-year-old woman with previous breast cancer diagnosis will have a status report for cervical and colorectal cancer screening, but not for breast cancer screening; B) Female patient has requested her record be excluded from one of the cancer screening programs, or the record has been excluded due to other factors, such as a history of hysterectomy.
14. A Cancer Screening Status Report will be available in Netcare for patients who fall within the target populations:

Breast Cancer Screening (risk groups are based on gender and age)

Main focus: routine screening through mammography recommended every 2 years for all females, aged 50 to 74 years. **Shoulder groups:** screening appropriate for only some women, based on risk or preference, aged 40 to 49 years & 75 to 84 years.

Cervical Cancer Screening (risk groups are based on gender and age)

Main focus: routine screening through Pap Test recommended every 3 years for all females, 25 to 69 years.

Shoulder groups: screening appropriate for only for a few women, based on risks/ clinical assessment, aged 21 to 24 years & 70 to 84 years.

Colorectal Cancer Screening (risk groups are based on age)

Main focus: routine screening through Fecal Immunochemical Test (FIT) recommended every 2 years for all, aged 50 to 74 years. **Shoulder groups:** screening appropriate for only some patients, aged 40 to 49 years & 75 to 84 years.

Alberta Cancer Screening Programs

Cancer Screening Status – Breast, Cervical and Colorectal ¹

(Report Date: 07-Mar-2017) ²

SMITH, Sally Mary ³			Age: 54 years
			Date of Birth: ⁴ 21-Mar-1963
			Gender: Female
			Alberta Unique Lifetime Identifier: 123456789

Type ⁵	Last Screen Type ⁶	Date of Last Exam* ⁷	Result of Last Exam ⁸	Status ⁹	Qualifier ¹⁰
Breast	Mammogram	20-May-2012	Normal	Due for screening	As per recommendation of last exam
Cervical	Screening Pap Test	01-May-2012	Abnormal	Follow-up as clinically indicated	Due for repeat Pap or referral as appropriate. Please refer to Alberta TOP Clinical Practice Guidelines to determine treatment status of patient.
¹¹ Colorectal	FIT	03-Jun-2016	Normal	Up-to-date	FIT every 1-2 years

¹² **Cervical Cancer Screening:** Women with a history of hysterectomy may appear on this report.

Colorectal Cancer Screening: At the current time, the Alberta Colorectal Cancer Screening Program does not capture information about screening colonoscopy or diagnostic follow up. The status in this report is based solely on the availability of FIT or FOBT test results, and a 2-year screening interval with FIT.

¹³ This report tracks patients active in the Alberta Cancer Screening Program (ACSP) with the exception of a diagnosis of one of the above types of cancer, out of province and/or exempt. The status contained in this report does not replace clinical assessment and judgment based on individual history and the Alberta TOP Clinical Practice Guidelines (for a link to the guidelines, please refer to the Resources section of Netcare). ***Newer screening exams may be available in other areas of Netcare due to a delay in data sent to the CSP.**

¹⁴ Guideline for routine screening: Breast – Women 50-74 years, screening mammography every 2 years; Cervical – Women 25-69 years, Pap every 3 years; Colorectal – all genders 50-74 years, FIT every 1-2 years.
